

V-locity Helped Minimize Downtime

“V-locity is extremely useful in a Meditech environment. It keeps free space clean and the FAL remediation tools saves from lengthy downtimes.”

James Roberts, Support, NTT Data Services

“MEDITECH customers have experienced unscheduled downtime due to an NTFS structure called the File Attribute List (FAL), which had reached its size limit. MEDITECH endorses ConduSiv’s I/O reduction software, V-locity and Diskeeper, for their process to eliminate this fragmentation problem. Indeed because of its design and feature set, we have also observed it accelerate application performance in a measurable way. Defragmentation is required for all 5x and 6x customers. We are pleased that ConduSiv has continued to enhance their solution and their products are strongly recommended.”

Michael Belkner, Associate VP Technology, MEDITECH

“Regarding cost savings, the value we receive from V-locity in not having to worry about our MEDITECH systems crashing due to FAL growth is invaluable. It doesn’t take long for downtime to accumulate into hundreds of thousands in lost revenue. However, the real surprise was the performance gains on our heaviest workloads.”

Joe Buckminster, IT Director, Community Medical Center Administrator, Goodwill Industries
