

V-locity Optimized ERP System

“When we first tried V-locity in our virtual infrastructure, we didn’t know how much of our performance was being penalized by the ‘I/O blender’ effect at the hypervisor and the surplus of split I/Os coming from the Windows VM. As it turns out, our performance was being severely dampened. It wasn’t until V-locity optimized our I/O streams that we realized some of our systems were processing half as many MB/s as they should from VM to storage.”

Kevin Schmidt, Director of IT, I.B.I.S., Inc.
