

V-locity Helped Optimize Exchange Servers

“We initially purchased V-locity I/O reduction software to meet an availability requirement, but what surprised us the most was how much value it added to our aging storage infrastructure by offloading a significant amount of I/O traffic. Not only did we get an immediate performance boost for MEDITECH, but we soon realized that we needed to try V-locity on our other Tier-1 applications like NextGen, MS-SQL, MS Exchange, Citrix XenApp, and others.”

Joe Buckminster, IT Director, Community Medical Center

“As soon as we installed V-locity and saw the Exchange timeouts disappear, and users were no longer getting disconnected from Exchange, that made our purchase of V-locity I/O reduction software a ‘no brainer.’”
