

## V-locity Helped Optimize Oracle Servers

“Not only did V-locity dramatically help our write-heavy MS-SQL and Oracle Servers by increasing performance 50–100% on several workloads, it also helped our Veeam backup. But we saw even bigger gains on our read-heavy applications that could take advantage of V-locity’s patented DRAM caching engine, that put our idle, unused memory to good use. Since we had provisioned adequate memory for these I/O-intensive systems, we were well positioned to get the most from V-locity.”

**Greg Landes, Manager of Systems Services, University of Illinois**
